Aqua feed supplement

HERBAL AQUA FEED SUPPLEMENT: ECOGOLD ENERMOL

In today's aquaculture scenario, feed alone will not suffice quality and increased yield. There are number of factors which results in lower yields like high density, quality of water, quality of feed itself and other environment factors like temperature. Salinity, dissolved oxygen content of the water.

SALIENT FEATURES:

- The immunity levels improve to a great extent and thus optimize body resistance and growth. Ultimately, liveability increases and so survival rate.
- The Prawn / fish is not only more healthier but can also withstand hot summers much better, reduces post molting mortality in prawns.
- It optimizes efficiency of hepatopancreas and thus normalizes physiology, digestion, feed intake, etc and thus improves weight again.
- It minimizes stress in general and disease outbreak thus minimizing the losses.
- As the harvesting time is cut down by 10-15 days, there is not only saving in the feed cost, but also management costs.
- It has been observed that prawns gain extra 3-4 grams weight in shorter time and ensures uniform growth.
- As the feed is better consumed (FCR), the accumulation of wastes at the bottom of the ponds is reduced drastically.

DOSAGE:

THE FINE POWDER HAS TO BE GIVEN TWICE A DAY (**MORNING AND EVENING**) ALONG WITH THE FEED FROM DAY 1 OF THE CULTURE. CAN BE BLENDED TO FEED EITHER BY USING FISH OIL OR BINDER(**WHICH IS SUPPLIED ALONGWITH THE PACK**) **IT HAS TO BE ENSURED THAT ALL POWDER STICKS TO THE FEED AND SHADE DRY FOR 30 MIN BEFORE BROADCASTING.**

SHRIMP: LESS THAN 30 DAYS: 1 gms / kg feed (1 kg/MT feed)

- **AFTER 30 DAYS TILL HARVEST TO SHRIMPS** : 2 grams/kg (3kg / MT feed)
- **FISH:** 2Kg/ MT feed (1000 Kgs)
