## Poultry Feed Supplement

Herbal Poultry Feed Supplement: Poultry farming is a commercial activity where the objective is to achieve maximum weight gain by the **BROILER** bird in the span of 42 days. Similarly for **LAYER** birds production for 300+ eggs in a year. Therefore feeding birds with best quality feed is not free from microbial contamination such as mycotoxins. Therefore a bird has to deal with same besides its regular production activity. Moreover the feed given to the birds is not Utilized completely in the normal course until some chosen ingredients are incorporated in feed to ensure that birds are able to retain maximum nutrients out of the given feed. "**P-HEALTH**" is a dual action feed supplement. Some of the ingredients of **P-HEALTH** improves the gut function and some are proven liver stimulants. The dual action, ensure better assimilation of feed nutrients which result in higher retention of these important nutrients in the body which are responsible for maximum performance. However, it is very important that whatever is the claim of a feed supplement finally it must be tested and confirmed whether they are delivering against the claims made. To get clarity about this the best and perhaps the only way is the actual field trials. The field trials of P-HEALTH have shown excellent result in terms of higher weight gain, better **FCR** and better **LIVABILITY**. An investment on **P-HEALTH** provides very lucrative **ROI of 1:25**

### **MODE OF ACTION OF P-HEALTH:**

- Increase secretions of essential digestive enzymes in pancreas and gut, enriching nutritional bio availability ensuring better assimilation of feed nutrients.
- Promotes healthier intestinal micro -flora, creating energy sparing effect for better performance.
- Increases bile secretion of optimum fat utilization.
- Optimizes hepatic function counteracts the ill effects of mycotoxins and chemical toxins in feed.
